

Digital Assistive Listening Transmit Module

Type: NX-DAL-MTX1

Overview

The DAL-MTX1w Digital Transmit module is part of the NX-DAL Assistive Listening system, which offers significant benefits for hearing impaired users over traditional AFILS listening systems:

- Simpler installation,
- Easier to manage,
- Better audio quality

The DAL Transmit module is normally fitted, out of sight, above ceiling tiles, and provides a digital link to the paired Personal DAL Receivers used in the room. The unit is powered from a local 12v DC PSU.

Audio for transmission is picked up from a location nearby the presenters podium by a high quality electret cardioid microphone. Alternately the audio source can be linked directly from the existing sound system in the room.

The audio broadcast is of hi-fi— quality and can be stereo if required. The range of coverage is up to 30 meters.

The equipment set comprises:

- 1x NX-DAL-MTX1w Transmit module
- 1x Mains PSU 12v Plug-in
- 1x Directional Electret Microphone
- 1x XLR Interface for direct AV connection

Specification

- 2.4GHz transmission
- Transmission Range: 30m
- Frequency Response: 20-20kHz
- Wall mounted or Free-standing case
- Integral charging leads:
- Digital Auto pairing: secure connection (green LED)
- PSU : Mains plug-in 12v
- Case Material: Black ABS
- Case Dimension: 100 x 65 x 50mm
